

Up for a Challenge?

If you have some experience with React and want to challenge yourself, I encourage you to try building the project on your own. Use the concepts and techniques we've covered in the course to build out the components, manage state, and handle user interactions.

Keep in mind that we'll be using Chakra UI to build the user interface. If you're not familiar with Chakra UI, don't worry. Treat it as a real-life situation where you get a job and the first week you have to use some tools you're unfamiliar with. This is a great opportunity to get used to reading documentation and learning new tools on the job.

Once you've built the project on your own, you can come back and take a look at my implementation to see if there are any alternative techniques or approaches you could use. This is a great way to reinforce what you've learned and build your confidence as a React developer.

Remember, building a project on your own can be challenging, but it's also incredibly rewarding. Don't be afraid to make mistakes or experiment with different approaches. That's how we learn and grow as developers!
